

Programming language : Java

Execution steps:

- Save the source code file as KruskalsAlgoMST.java
- Open the folder containing KruskalsAlgoMST.java file in command prompt
- Type javac KruskalsAlgoMST.java and press enter
- After the compilation of the code type java KruskalsAlgoMST and press enter to execute the code
- When prompted Enter the m, n integer input values and click enter.
- If the code is showing some error, execute it again. The error is because the random function sometimes gives wrong values while creating the graph. If the graph is perfect the code will be executed successfully.
- The code will successfully be executed and displays the output.
